

## Albania

Administrative Level 2: Communes

### Measures of Inequality

## Generalized Entropy, parameter=0

The Generalized Entropy Index (GE) is a measure of inequality. A value of zero represents perfect equality, and higher values denote increasing levels of inequality, within a mapped administrative unit. The parameter reflects the relative importance assigned to differences between welfare levels at different places in the distribution. Here, the parameter value 0 means that differences at the low end of the welfare distribution are assigned more importance than those at the high end. GE(0) is also known as the mean log deviation.

*Each color represents a cluster of similar values.*
